Results in yellow have few ySTR matches with any other result. Common ancestor for those within same Haplogroup maybe thousands of years.

This I1a designation has been confirmed by a retest of C1.

A1, A2, A3, A4, B1 share the same ySTR values at 40 of 43 location markers. In addition, they share the same predicted hg\_R1b Haplogroup designation. They are all clearly related. B1 represents the connection back to England. A living resident, descended from William Sturtivant of Nottinghamshire.

D1, D2, D3 share the same values at 42 of 43 marker locations. They represent 3 grandsons of John of 1650 VA. The R1b3 designation for this group comes from the SNP test by D3.

C1-C3, & C6-C10 share the same values at 40 of 43 marker locations. They are all closely related. There is not enough information to say that C7 represents another grandson of William.
