[Original Data](#)

Haplogroups for FTDNA results are Predicted

This document is a comparison of STR results found on the Sturdevant Project Page at World Families.net with the closest match in the St*r**v*nt Genetic Project, linked in the pink band above. These 3 results through Family Tree DNA are re-ordered from the original data as to reflect the 43 markers tested through DNA Heritage, Ancestry and Sorenson in the Stl*r**v*nt Genetic Project. (20 + results so far). There are 34 markers in common.

D1 from the project is the closest match. D1 is a descendant of John SturDIvant 1650s VA through grandson Hollam. Click on the blue D1 link to see his surname list. The 1 SturDIVant matches 12/12 as would be expected in samples of the same Haplogroup. But there is no close genetic relationship between any of the participants in the St*r**v*nt Project with these 3 results.

All of the I Haplgroup participants in the St*r**v*nt Genetic Project are strongly associated with the DE spelling of the name which in turn is strongly associated with the descendants of William SturDEvant 1675 Norwalk CT.

The TE spelling in the St*r**v*nt Genetic Project are R1b, but not close to any of these World Families results. The TE spelling results are all descendants of Samuel SturTEvant of 1640 MA and identical to the results from our English participant - B1.

I can be contacted at dna_info@sturgood.com. My name is JS Sturdevant. I am project administrator of the St*r**v*nt Genetic Project This project uses dna testing to expand our knowledge of the relationships within and between the various spellings of our surname.
